Reference: **Whipple Drive Residential – Traffic Impact Analysis (TIA)**
Town of Blacksburg, Virginia

Dear Mr. Middleton,

JJB Properties, LLC is proposing to construct a residential development on the east side of Whipple Drive, just south of Givens Lane. The development plan includes 34 townhome units (98 bedrooms) with a one-way loop driveway provided via a single entrance only access and a single exit only access on Whipple Drive. If approved, the proposed neighborhood is expected to be built-out by 2023.

Ramey Kemp & Associates, Inc. (RKA) has performed this Traffic Impact Analysis (TIA) based on discussions with the Town. Figure 1 shows the site location and study intersections, and Figure 2 shows the preliminary site plan.

Existing Roadway Conditions

Main Street is a four-lane Minor Arterial with an average daily traffic (ADT) volume of approximately 6,500 vehicles per day (vpd) and a posted speed limit of 35 miles per hour (mph) in the vicinity of the site

Whipple Drive is a local roadway with an ADT volume of approximately 1,500 vpd and a posted speed limit of 25 mph in the vicinity of the site.

Figure 3 shows the existing roadway laneage at the study intersection.

Existing Traffic Volumes

The AM peak hour (7:00 to 9:00 AM) and PM peak hour (4:00 to 6:00 PM) turning movement counts were conducted by Burns Services, Inc. at the following intersections during the week of April 12:

- N Main Street and Whipple Drive
- N Main Street and Givens Lane
- Whipple Drive and Givens Lane

Based on coordination with the Town, due to low existing traffic volumes, the only analyzed intersection was N Main Street and Whipple Drive.

Although the existing traffic volumes on Main Street were similar, if not higher than the historical traffic data available, a conservative approach was taken in which the 2022 traffic volumes were increased by 5%. This methodology is like one used for traffic studies performed during the heart of the COVID-19 pandemic to

account for potentially low volumes due to irregularity in school schedules and a greater population working from home. Based on traffic trends, traffic patterns have nearly returned to ‘pre-COVID’ levels, however this conservative approach was utilized to emphasize the negligible impact of the proposed development. The traffic count data is enclosed, and the inflated existing 2022 volumes are shown in Figure 4.

Approved Developments

Based on discussion with the Town, no approved developments were included in this TIA.

Background Traffic Growth

Based on discussion with the Town, the 2022 peak hour traffic volumes were grown by an annual rate of 2.5% for one year to estimate the no-build 2023 peak hour traffic volumes which are shown in Figure 5.

Trip Generation

Table 1 shows the trip generation potential of the proposed community based on the Institute of Transportation Engineers (ITE) *Trip Generation Manual – 11th Edition*.

Table 1: ITE Trip Generation – Weekday – 11th Edition

Land Use (ITE Land Use Code)	Size	Weekday Daily Traffic (vpd)		AM Peak Hour (vph)		PM Peak Hour (vph)	
		Enter	Exit	Enter	Exit	Enter	Exit
Off-Campus Student Housing (225)	98 bedrooms	195	195	4	12	15	15

Based on information contained within the Trip Generation Manual, the development could be expected to generate approximately 390 trips on a typical weekday with 16 trips (4 entering and 12 exiting) generated during the AM peak hour [less than 1 car every 3 minutes] and 30 trips (15 entering and 15 exiting) generated during the PM peak hour [approximately 1 car every 2 minutes]. It should be noted that due to proximity to campus and existing near-by bus stops, it is expected that a percentage of traffic would utilize alternate modes of transportation (i.e. Blacksburg Transit), however, to provide a conservative approach, no reductions were applied.

Site Trip Distribution

The following site trip distribution was applied based on a review of the existing traffic volumes, the adjacent roadway network, and engineering judgement:

- 10% to / from the north on N Main Street
- 60% to / from the south on N Main Street
- 30% to / from the west on Givens Lane

Figure 6 shows the site trip distribution, Figure 7 shows the site trip assignment, and Figure 8 shows the build 2023 peak hour traffic volumes.

VDOT Turn Lane Warrant Analysis

The projected build-out AM and PM peak hour traffic volumes at the proposed entrance were compared to the turn lane warrants in the Virginia Department of Transportation (VDOT) *Access Management Design Standards for Entrances and Intersections*. Due to low existing and projected traffic volumes along Whipple Drive, turn lanes are not warranted.

Traffic Capacity Analysis

Traffic capacity analysis for the study intersections was performed using Synchro 10, which is a comprehensive software package that allows the user to model signalized and unsignalized intersections to determine levels-of-service based on the thresholds specified in the Highway Capacity Manual (HCM) – 6th Edition.

Table 2 summarizes the capacity analysis results for the unsignalized intersection of N Main Street at Whipple Drive and the Synchro outputs are enclosed for reference.

1. Level of service for minor approach
2. Level of service for major-street left-turn movement
3. HCM methodology does not provide lane group or overall LOS, delay, and queue lengths for major street through movements or right turns at unsignalized intersections.

Capacity analysis indicates that the minor-street approaches are expected to operate at LOS B during the AM peak hour and LOS E or better during the PM peak hour. The major street left-turn movement is expected to operate at LOS A during the AM and PM peak hours for all traffic conditions. The site trips will increase the total approach volume at this intersection by less than 2% during the AM and PM peak hours. While the westbound approach is expected to degrade one level-of-service during the PM peak hour, the delay is only expected to increase by 2 seconds.

As requested by the Town, a signal warrant analysis for the intersection of N Main Street and Whipple Drive was included. Based on the MUTCD signal warrants, no signal is warranted, nor is a signal recommended. No improvements are warranted or recommended at this intersection at build-out of the proposed community.

Table 3 summarizes the capacity analysis results for the proposed intersections of Whipple Drive at the Site Entrance/Exit and the Synchro outputs are enclosed for reference.

Table 3: Level-of-Service Summary for Whipple Drive at Site Driveways

INTERSECTION	CONDITION	LANE GROUP	AM PEAK HOUR				PM PEAK HOUR

1. Level of service for minor approach
2. Level of service for major-street left-turn movement
3. HCM methodology does not provide lane group or overall LOS, delay, and queue lengths for major street through movements or right turns at unsignalized intersections.

Under build conditions, the minor street left-turn movement is expected to operate with short delays (less than 9 seconds) during the AM and PM peak hours with minimum expected queues.

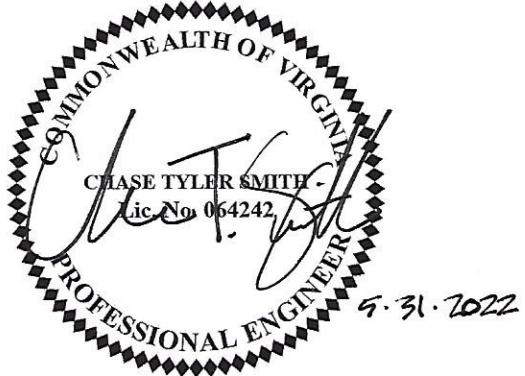

Recommendations

Based on the traffic capacity analysis, both study intersections will function at an acceptable overall level-of-service at build out of the proposed community. Refer to Figure 9 for an illustration of the recommended lane configurations for the study intersections.

As requested by the Town, additional analysis was completed for the intersection of N Main Street and Givens Lane. Based on the project build traffic conditions, the minor-street approaches are expected to operate at LOS C during the AM and PM peak hours and the major-street left turn movement is expected to operate at LOS A during the weekday AM and PM peak hours. The site trips will increase the total approach volume at this intersection by less than 0.5% during the AM and PM peak hours.

We appreciate your attention to this matter. Please contact me at (336) 714-0112 if you have any questions about this report.

Sincerely yours,
Ramey Kemp & Associates, Inc.

Chase Smith, P.E.
