**Subject: Traffic Impact Analysis**

Dear Mr. Wills,

This letter provides a summary of the traffic impact analysis prepared for the proposed 7Brew development to be located in the northeast quadrant of the intersection of S. Main Street and Ardmore Street, adjacent to the Blacksburg Square commercial center in Blacksburg, Virginia. The purpose of this study is to determine the potential impacts to the surrounding transportation system created by traffic generated by the proposed development, as well as recommend improvements to mitigate the impacts, if necessary.

### **Site Location and Study Area**

As noted, the proposed 7Brew development is to be located east of U.S. Business 460 (S. Main Street) between Ardmore Street and Blacksburg Square. Based on coordination with the Town of Blacksburg (Town). The study area consists of the following existing intersections:

- S. Main Street and Country Club Drive
- S. Main Street and Gables/Blacksburg Square
- S. Main Street and Lefty's/Blacksburg Square
- S. Main Street and Ardmore Street
- S. Main Street and Marlington Street
- Ardmore Street and Site Access Road

Refer to Attachment A for the approved scoping documentation. Refer to Attachment B for the site location map.

## **Proposed Land Use and Site Access**

The proposed development is expected to consist of a coffee shop with 2 drive-through lanes and no indoor seating. Completion of the proposed development is anticipated by the end of 2025. Site access is proposed via one new (1) full-movement driveway located along Ardmore Street as well as via interconnectivity with the Blacksburg Square Commercial Center. Refer to Attachment B for a copy of the preliminary site plan

## **Adjacent Land Uses**

The proposed development is located in an area consisting of commercial development, surrounded by residential.

## **Existing Roadways**

Existing lane configurations (number of traffic lanes on each intersection approach), speed limits, storage capacities, and other intersection and roadway information within the study area are shown in Attachment B. Table 1 provides a summary of this information, as well.

**Table 1: Existing Roadway Inventory**

Road Name	Route Number	Typical Cross Section	Speed Limit	2022 ADT (vpd)
S. Main Street	US Bus 360	2-lane undivided	35 mph	22,000
Country Club Drive	VA-150	4-lane divided	25 mph	3,200
Gables Driveway	N/A	2-lane undivided	Not Posted	N/A
Lefty's Driveway	N/A	2-lane undivided	Not Posted	N/A
Blacksburg Square Driveway	N/A	2-lane undivided	Not Posted	N/A
Marlington Street	N/A	2-lane undivided	25 mph	N/A
Ardmore Street	N/A	2-lane undivided	25 mph	N/A

\*2022 ADT was obtained from VDOT Traffic Volume ArcGIS Map

## Existing Traffic Conditions

Existing peak hour traffic volumes were determined by forecasting previously collected traffic counts (from November 2022) at the study intersections except for the intersection of S. Main Street and Lefty's/Blacksburg Square Access. The 2022 traffic counts were projected to the existing year (2024) utilizing a 2.5% growth rate (approved by the Town). Traffic counts for the intersection of S. Main Street and Lefty's/Blacksburg Square were collected in March 2024 over the period of two typical weekdays during the AM (7:00 AM – 10:00 AM) and PM (3:00 PM – 6:00 PM) peak periods while local schools and universities were in session. Weekday AM and PM traffic volumes were then balanced between study intersections, where appropriate. Refer to Attachment B for an illustration of 2024 existing traffic volumes and Attachment C for the raw traffic count data.

The study area consists of the following existing intersections:

- S. Main Street and Country Club Drive
- S. Main Street and Gables/Blacksburg Square
- S. Main Street and Lefty's/Blacksburg Square
- S. Main Street and Ardmore Street
- S. Main Street and Marlington Street
- Ardmore Street and Site Access Road

## 2025 No-Build Traffic Conditions

No-build traffic volumes were determined by projecting existing peak hour traffic volumes to the proposed build-out year utilizing the aforementioned 2.5% annual growth rate approved by the Town. The forecasted traffic volumes represent the no-build traffic volumes for this study.

Refer to Attachment B for an illustration of the 2025 no-build peak hour traffic volumes.

## Site Trip Generation

Average weekday daily, AM peak hour, and PM peak hour trips for the proposed development were estimated using methodology contained within the ITE Trip Generation Manual, 11.1 Edition. Table 2 provides a summary of the trip generation potential for the site.

**Table 2: Site Trip Generation**

Land Use (ITE Code)	Intensity	Daily Traffic (vpd)	Weekday AM Peak Hour Trips (vph)		Weekday PM Peak Hour Trips (vph)	
			Enter	Exit	Enter	Exit
Coffee/Donut Shop with Drive-Through Window and No Indoor Seating (938)	2 Drive Through Lanes	358	50	50	17	17
Pass-By Trips (capped at 65%)*		-88	-33	-33	-11	-11
Primary (New) Trips		270	17	17	6	6

\*ITE notes a pass-by rate of 90% (AM) and 98% (PM) for the proposed land use. However the pass-by rates were capped at 65% of the total trip generation (per the Town).

## Trip Distribution and Assignment

The primary site trips were distributed based on existing traffic patterns, population centers adjacent to the study area, and engineering judgment. A summary of the primary regional distributions is below:

- 40% to/from the north via S. Main Street
- 35% to/from the south via S. Main Street
- 15% to/from the west via Country Club Drive
- 10% to/from the east via Ardmore Street

The pass-by trips were also considered for this study and distributed based on the locations of existing traffic patterns, population centers adjacent to the study area, and engineering judgment. Pass-by trips are made by the traffic already using the adjacent roadway, entering the site as an intermediate stop on their way to another destination. Pass-by trips do not add trips to off-site intersections rather they are added only as turning movements at the proposed access locations. It should be noted that the ITE Trip Generation Manual shows pass-by rates of 90% and 98% for the proposed land use during the AM and PM peak hours, respectively. However, for the purpose of this analysis (and a conservative

approach), the pass-by rates were capped at 65% during the peak hours. Pass-by trips were distributed based on existing traffic patterns.

Refer to Attachment B for illustrations of the site trip distribution and site trip assignment, respectively.

## 2025 Build Traffic Conditions

To estimate the 2025 build traffic conditions with the site fully built-out, the total site trips were added to the 2025 no-build traffic volumes. Refer to Attachment B for an illustration of the 2025 build peak hour traffic volumes.

## Traffic Capacity Analysis

Traffic capacity analysis for the study intersections was performed using Synchro 11, which is a comprehensive software package that allows the user to model signalized and unsignalized intersections to determine levels-of-service based on the thresholds specified in the Highway Capacity Manual (HCM). The traffic capacity analysis completed in accordance with the VDOT Traffic Operation and Safety Analysis Manual as well.

Refer to Table 3 for HCM levels of service and related average control delay per vehicle for both signalized and unsignalized intersections.

**Table 3: Highway Capacity Manual – Levels-of-Service and Delay**

Unsignalized Intersections		Signalized Intersections

Capacity analysis indicates that the intersection is expected to operate at an overall LOS B during the AM peak hour and LOS C during the PM peak hour during all traffic conditions. All lane groups are expected to operate at LOS D or better during the AM and PM peak hours for all traffic conditions, with the exception of the eastbound shared through/right movement of Country Club Drive during the PM peak hour (all traffic conditions). It is not uncommon for the minor street approaches of signalized intersections to experience heavier delays, especially when the signal is located within a coordinated system where precedence is given to the mainline traffic to maximize progression. When comparing build to no-build traffic conditions, all levels of services are expected to be maintained and delays are not expected to increase by more than 1 second.

Due to negligible impacts expected by the proposed development, no improvements are recommended by the developer.

### Ardmore Street and Site Access

Refer to the table below for a summary of the capacity analysis of the subject intersection during the analysis scenarios.

1. Level of service for minor-street movement.
2. Level of service for major-street shared left turn movement.

Capacity analysis indicates that the major-street left-turn and minor street approach are expected to operate at LOS A during the AM and PM peak hours during all traffic conditions.

Due to negligible impacts expected by the proposed development, no improvements are recommended by the developer.

### **Findings and Summary**

Capacity analysis at all study intersections was completed in accordance with the Town of Blacksburg and VDOT Traffic Operations and Safety Analysis Manual. All study area intersections are expected to operate at acceptable levels-of-service under existing and future year conditions. Based on the findings of this study, it was determined that the proposed development would not have a major impact on traffic operations in this corridor. See below for a description of the recommended lane configuration and traffic control at the proposed access on Ardmore Street. Refer to Attachment B for an illustration of the recommended lane configuration and traffic control for the proposed development.

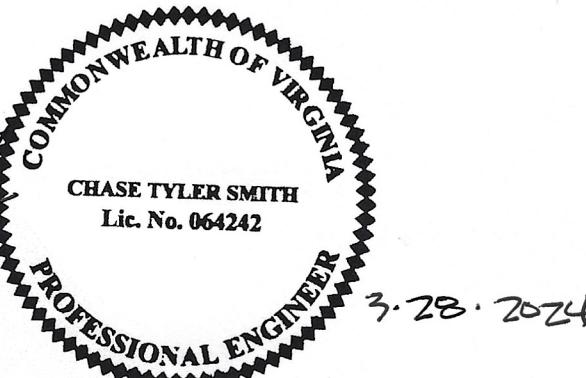

## Recommended Lane Configuration and Traffic Control

### Ardmore Street and Site Access

- Construct Site Access as a full-movement driveway with at least one ingress lane and one egress lane.
- Provide stop-control for site egress.

#### NOTES on ASSUMPTIONS:

The TIA will include three analysis scenarios:

- Existing (2024) Traffic Conditions
- No-Build (2025) Traffic Conditions
- Build (2025) Traffic Conditions

- Existing Traffic Counts Available at the following intersections from 8/31/22:

1. S Main Street and Country Club Drive
2. S Main Street and Gables Shopping (Kroger Driveway)
3. S Main Street and Ardmore Street
4. S Main Street and Marlington Street

-Traffic Counts to be collected at the following intersection:

1. S Main Street and Lefty's/Blacksburg Square

An additional day of traffic counts will be collected at the intersection above. Traffic counts will be conducted on two consecutive days for both AM (7-10) and PM (3-6) peak hours at the intersection.

- 2.5% compounded growth rate is recommended per Town staff from recent traffic studies completed in the area.

It is important for the applicant to provide sufficient information to county and VDOT staff so that questions regarding geographic scope, alternate methodology, or other issues can be answered at the scoping meeting.

#### LEGEND

**PHV** - Peak Hour Volume (also Design Hourly Volume equivalent)

#### Adjustment for Right Turns

For posted speeds at or under 45 mph, PHV right turns > 40, and PHV total < 300.

Adjusted right turns = PHV Right Turns - 20

If PHV is not known use formula:  $PHV = ADT \times K \times D$

K = the percent of AADT occurring in the peak hour

D = the percent of traffic in the peak direction of flow

Note: An average of 11% for K x D will suffice.

When right turn facilities are warranted, see [Figure 3-1](#) for design criteria.\*
